- ✓ Een **lowercase** letter
- ✗ Een **uppercase** letter
- ✗ Een **nummer**
- ✗ **Minimum 8 characters**
- ✗ Andere characters vb: (, :, ...

Password

Wachtwoord sterkte: **undefined**

- ✓ Een **lowercase** letter
- ✓ Een **uppercase** letter
- ✓ Een **nummer**
- ✓ **Minimum 8 characters**
- ✓ Andere characters vb: (, :, ...

ACCEPTANCE CRITERIA:

- There need to be a few suggestions to what characters should be included for a secure password
- When a certain suggestion is not implemented, it is colored red to show it's not implemented
- When a certain suggestion is used in the password, the suggestion should be marked green to show it's implemented
- The meter is filled every time one of the suggestions is fulfilled
- Every time a suggestion is fulfilled a message below the meter is displayed to show the password strength.
- Whenever a character is added or deleted the password is checked by Javascript
